

Geography of Pakistan

Lecture 02

- Natural Resources &
- Agriculture of Pakistan

CLO 01

Students will be able to explain Pakistan's geography, natural resources, population characteristics, and economic sectors, and analyze their role in national development

CLO 03

Students will be able to analyze Pakistan's foreign policy evolution, geostrategic importance, and relations with regional and global actors. Also, can critically assess Pakistan's internal, external security challenges, Cyber threats, social issues, and policy responses in the context of national integration, sovereignty and stability.

What is Natural Resource?

Natural Resource is any thing that people can use which comes from nature. People do not make natural resources, but gather them from earth.

Natural resources are found in and on the earth.

Examples of natural resources are air, water, wood, oil, wind energy, hydro electric energy, iron and coal etc.

Natural Resource of Pakistan

- Apart from Strategic location, natural resources of Pakistan include an extensive natural gas supply, some oil, hydro power potential, coal (although not high quality), iron ore, copper, salt, and limestone.
- Agricultural products are wheat, cotton, rice, sugarcane, eggs, fruit, vegetables, milk, beef, and mutton.
- Primary industry includes textiles, food processing, pharmaceuticals, construction materials, shrimp, fertilizer, and paper products.
- Major exports are textiles, rice, leather goods, sports goods, carpets, rugs, and chemicals. Pakistan imports petroleum, machinery, plastic, edible oil, iron, steel, tea, and paper.

Natural Recourses Of Pakistan

Agriculture in Pakistan

- About 57% of Pakistan's total land area is under cultivation and is watered by one of the largest irrigation systems in the world.
- The most important crops are cotton, wheat, rice, sugarcane, corn, pulses, oil seeds, barley, fruits and vegetables

Natural Recourses Of Pakistan

Fishing in Pakistan

- Fishery and fishing industry plays an important role in the national economy of Pakistan.
- With a coastline of about 1046 km, Pakistan has enough fishery resources that remain to be fully developed.
- It is also a major source of export earning.

Natural Recourses Of Pakistan

Forestry in Pakistan

- About only 4% of land in Pakistan is covered with forests.
- The forests of Pakistan are a main source of food, wood for domestic use, paper, fuel wood, rubber, medicine as well as used for purposes of wildlife conservation and tourism.

Natural Recourses Of Pakistan

Mining in Pakistan

- The Salt Range in the Potwar Plateau has large deposits of rock salt.
- Pakistan has extensive mineral resources, including fairly sizable reserves of gypsum, limestone, chromite, iron ore, rock salt, silver, gold, precious stones, gems, marbles, tiles, copper, sulfur, fire clay, silica sand.

COAL

- Pakistan recently discovered one low and four low- to-medium quality coal seams in the Punjab.
- Low sulfur coal was recently reported at the Baluchistan and near Islamabad.
- Bituminous, sub-bituminous, and lignite coal have been found in Pakistan.
- Coal reserves are estimated at 175 billion tons. This would equate to 618 billion barrels of crude oil. When compared to oil reserves this is more than twice the amount of the top four countries. If At KSA's current usage, the reserves would last more than 200 years.

OIL & GAS

Major Coal, Oil and Gas Fields in Pakistan

Natural gas production is at a high level in Pakistan. Estimated reserves are 885.3 billion cubic meters. Gas fields are expected to last for another 20 years. The Sui gas field is the largest, accounting for 26% of Pakistan's gas production. Daily production is 19 million cubic meters a day. Under the barren mountains of Baluchistan and the sands of Sindh, there are untouched oil and gas reserves.

LAND as a Resource

About 28% of Pakistan's total land area is under cultivation. Pakistan boasts one of the largest irrigation systems in the world. The most important crops are cotton, wheat, rice, sugarcane, maize, sorghum, millets, pulses, oil seeds, barley, fruits and vegetables, which together account for more than 75% of the value of total crop output. The fertile lands of Punjab are ready to feed a population twice that of current Pakistan.

Uranium

Pakistan has a long history of exporting small amounts of uranium.

In 2006 Pakistan produced about 45 tons of uranium.

Source of uranium comes from continental sediments of Siwalik group which is divided into three divisions, Upper Siwalik Division (1800-2400m thick), Middle Siwalik Division (1800-2400m thick), and Lower Siwalik Division (1500m thick). This Siwalik Group spread along Himalayan foot hill from Asam to Kashmir and covers the area of Potwar Plateau, Balillu Plains, Bannu Basin and Sulaiman Range.

Water Resource

Water Natural resources include rainfall, rivers, glaciers, ponds, lakes, streams, karez and wells etc.

- The fishing industry plays a role in the national economy of Pakistan. The coastline is 814km and fishery resources still have room to grow. Fishing in Pakistan is a major source of export earnings.

Natural Recourses Of Pakistan

- **Export commodities:**
garments, bed linen, cotton cloth and yarn, rice, leather goods, sports goods, chemicals, carpets and rugs
- **Imports commodities:**
petroleum, petroleum products, machinery, plastics, transportation equipment, edible oils, paper and paperboard, iron and steel, tea.

CONCLUSION

- **The geography of Pakistan is a profound blend of landscapes varying from plains to deserts, forests, hills, and plateaus ranging from the coastal areas of the Arabian Sea in the south to the mountains of the Karakoram range in the north.**

Thank You
